

# Impacts and Science in the Aftermath of *Deepwater Horizon*

Steven A. Murawski  
University of South Florida  
[smurawski@usf.edu](mailto:smurawski@usf.edu)

Gulf Consortium Meeting  
21 April, 2016  
Tampa

# Outline

- What have we learned?
- What do we need to know?
- How can we be better prepared for future disasters?
- Ongoing monitoring and research funded by various entities

# Some Current Research and Monitoring Programs Funded in the Gulf

- Gulf of Mexico Research Initiative ([GoMRI](#)) \$500 m, basic research and monitoring of contaminant effects
- National Academy of Science ([NAS Gulf Program](#)) \$500 m over 30 years, engineering, worker safety and monitoring the environment
- Florida Restore Act Centers of Excellence Program ([FLRACEP](#)) ` \$40 m over 15 years
- National Fish and Wildlife Foundation ([NFWF Gulf Environmental Benefits Fund](#)) ~\$340 m in Florida, \$2b total
- Natural Resources Damage Assessment ([NRDA](#)), projects ending as settlement has occurred, transition to monitoring restoration

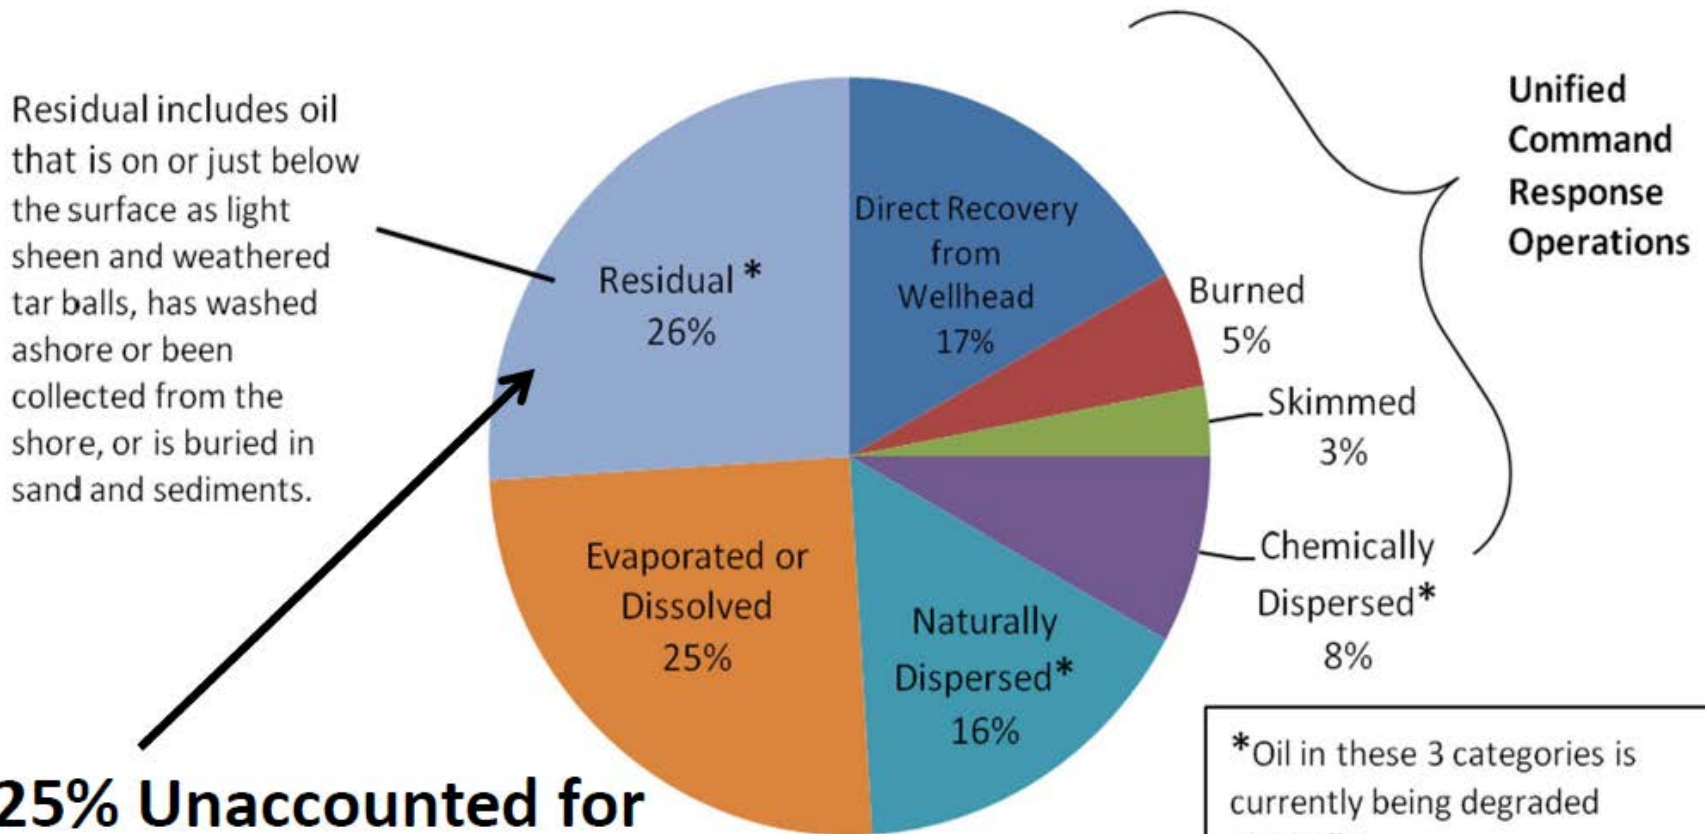

# *What do People Care About?*

- Where is (or was) the Oil?
  - How Toxic is it?
  - How Fast is it Going Away?
- What About Dispersants?
- Is the Seafood Safe to Eat?
- Impacts on Wildlife & People?
- Are We Better Prepared for the Next Time?

# Where is (was) the Oil?

## Deepwater Horizon Oil Budget

Based on estimated release of 4.9m barrels of oil

# Abrupt changes in the sedimentary depositional system at 1000-1200m during the DWH blowout

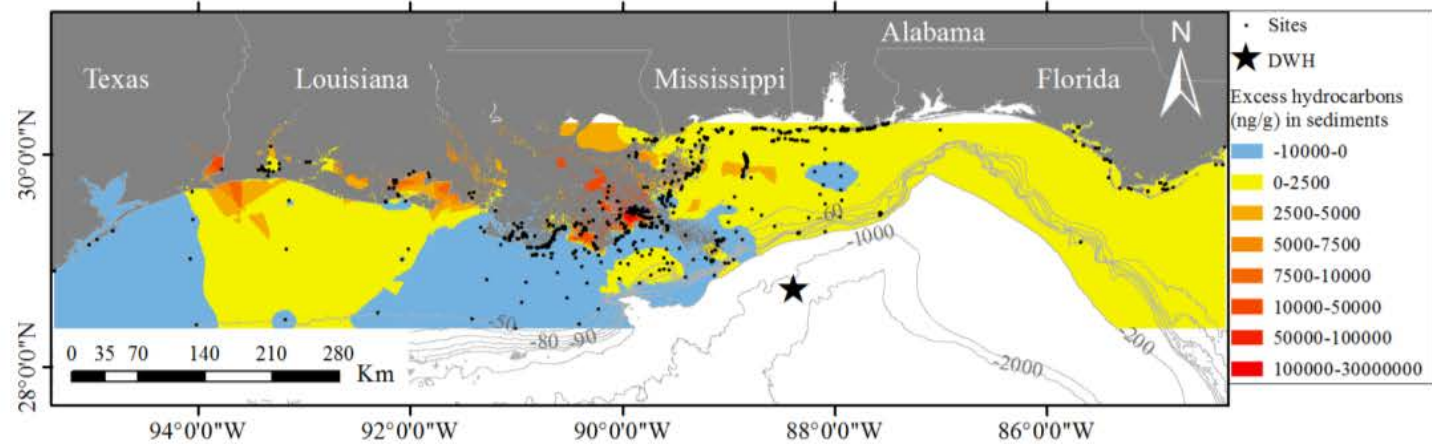

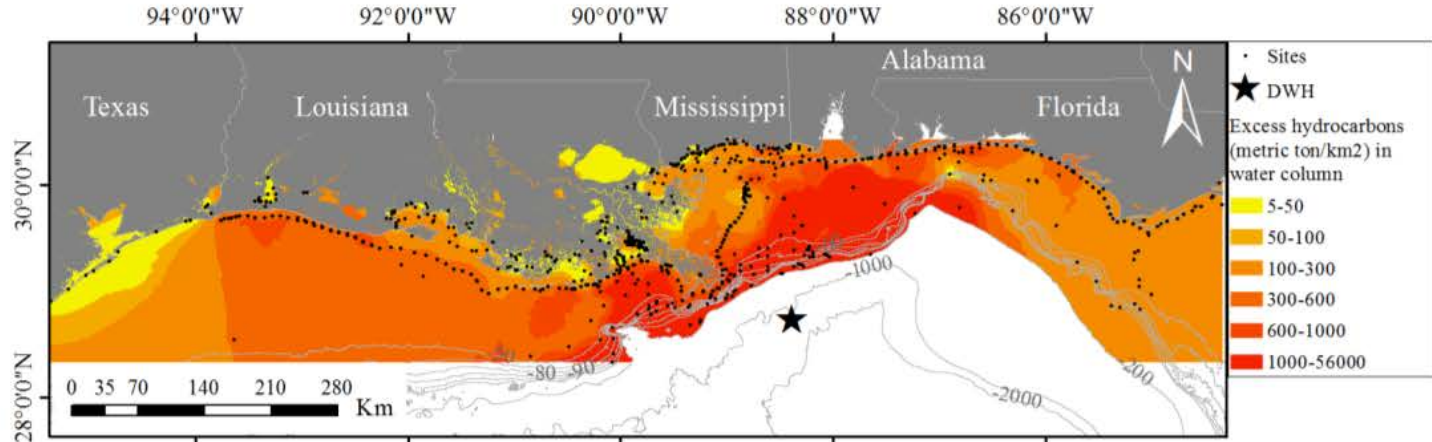

**Why no bioturbation in these oligotrophic environments??**

## Depth Profile in Water

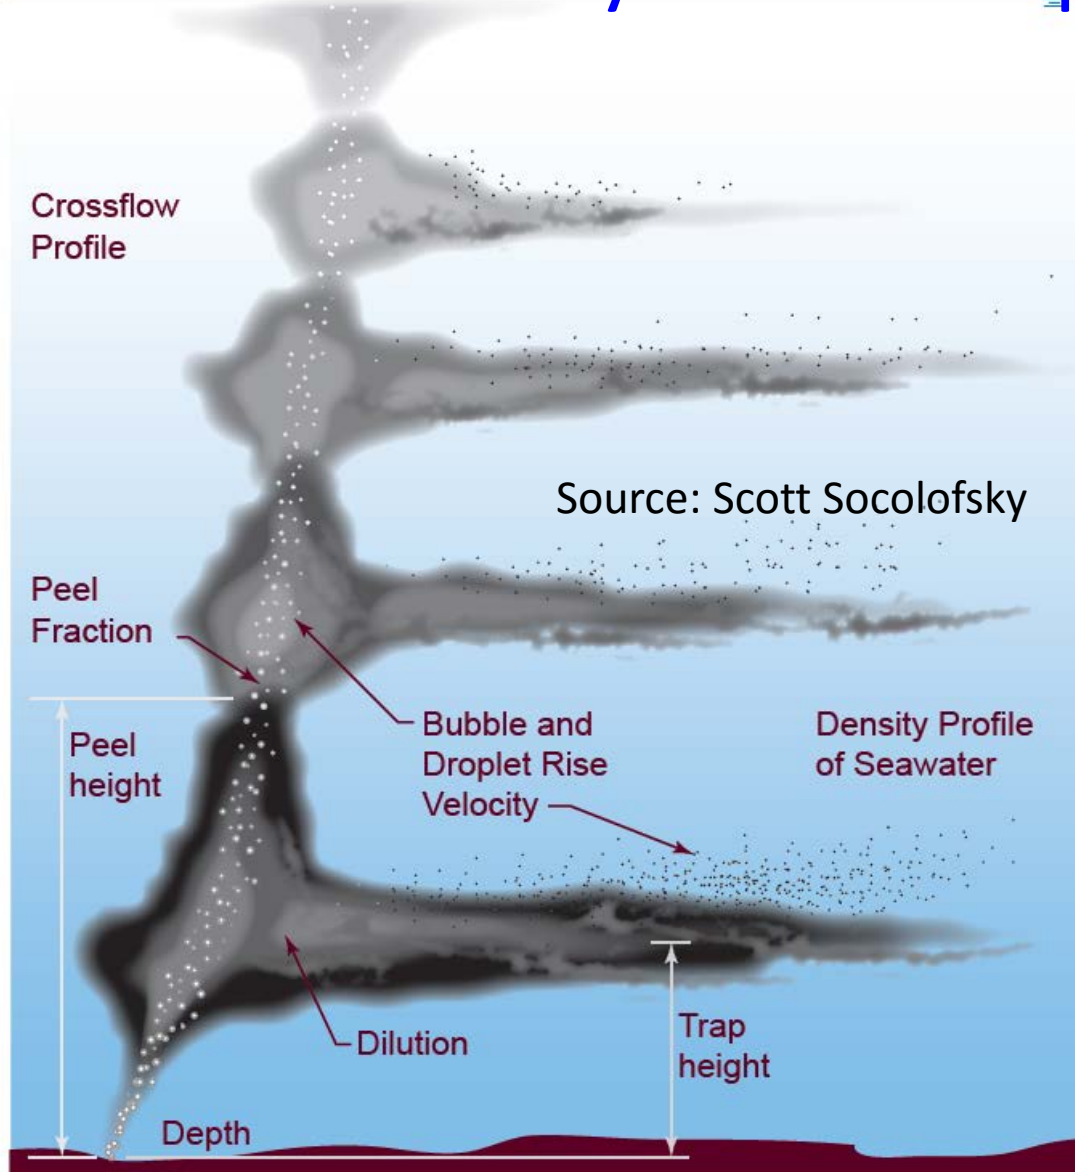

## Oil in the Water Column

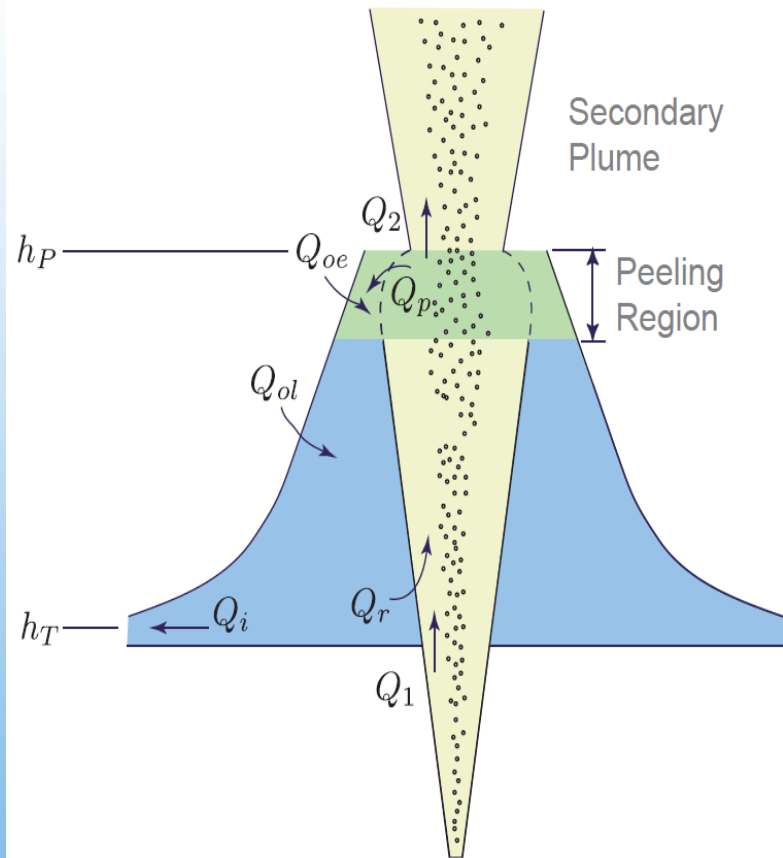

## Oil on the Bottom

# Uniqueness of DWH: Near field Physics of Deep Blowouts

Model of flows in a stratified multiphase plume

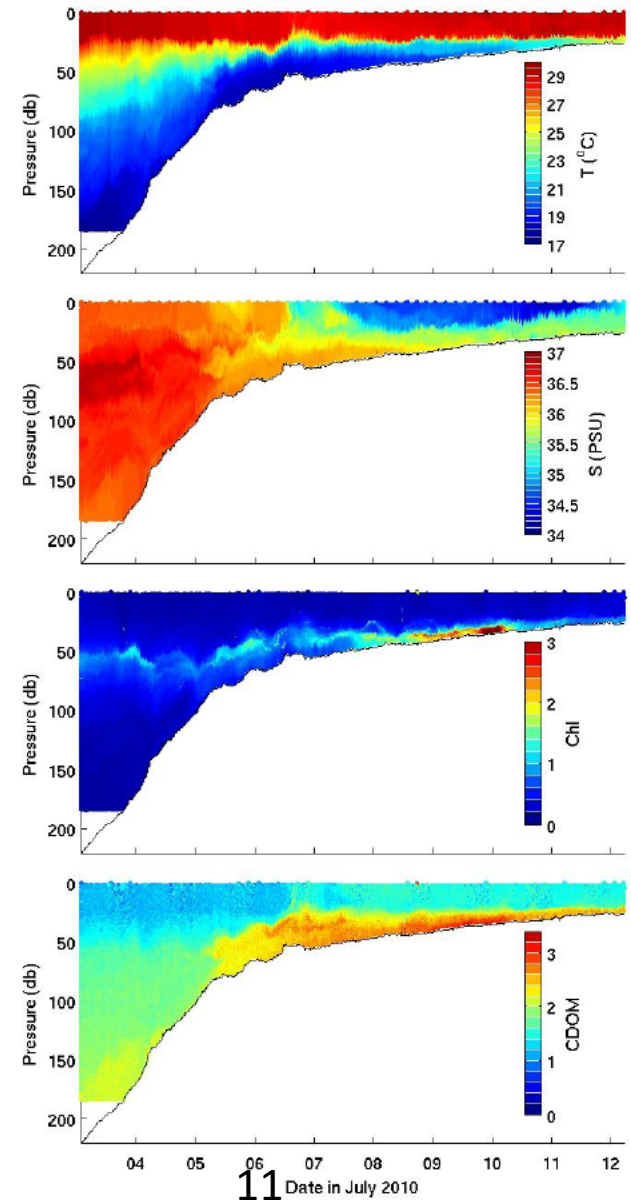

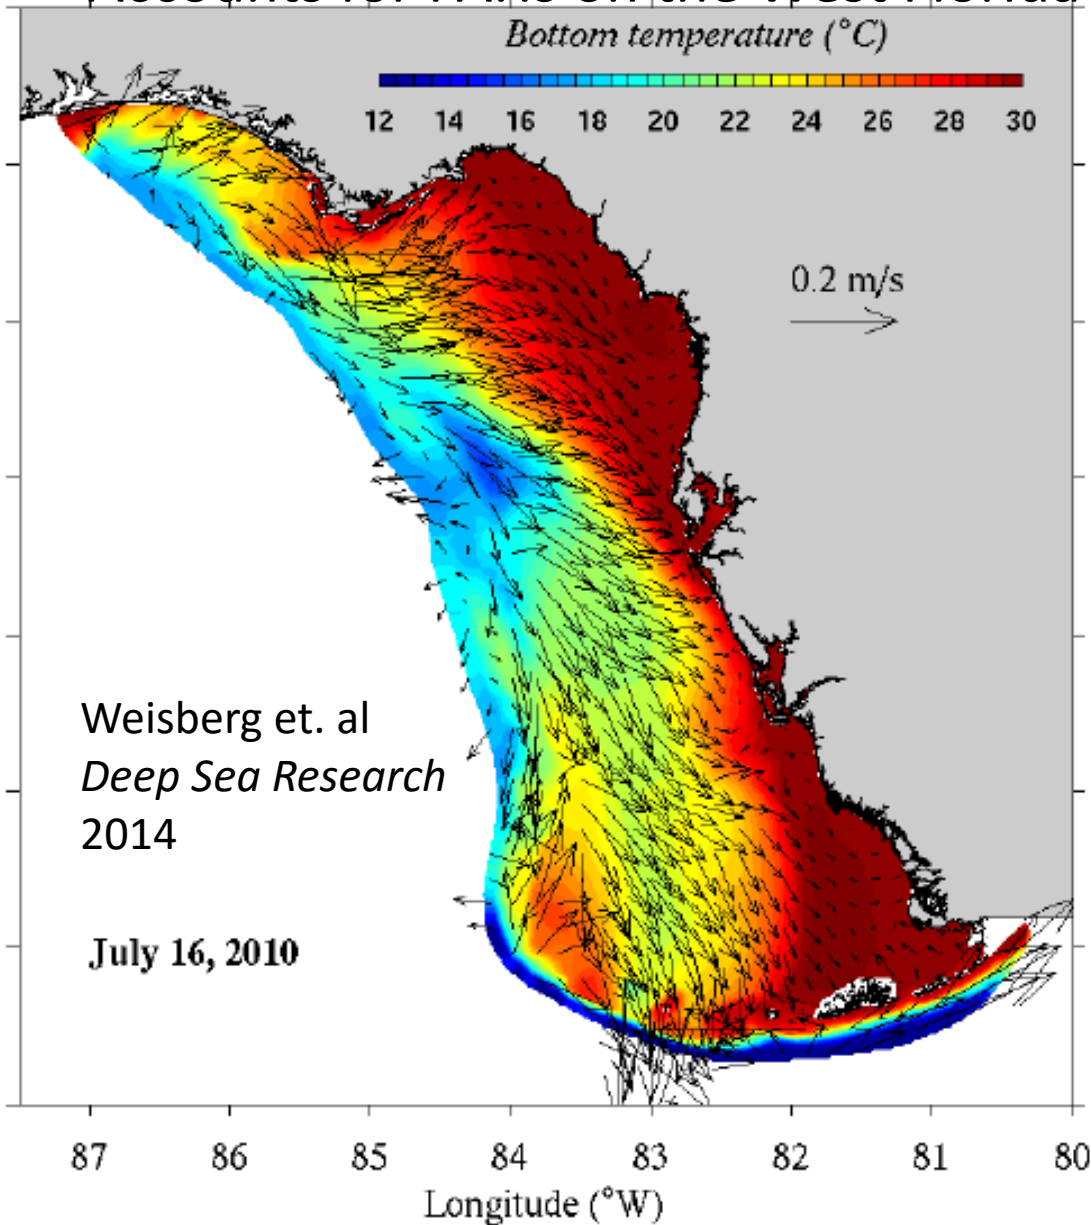

Dynamically coupled to GoM circulation models

Oil presence depending on droplet size (microns), 04/20/10

# Near-Field Plume Dynamics and Far-Field Fate of Subsurface & Surface Oil Modeling

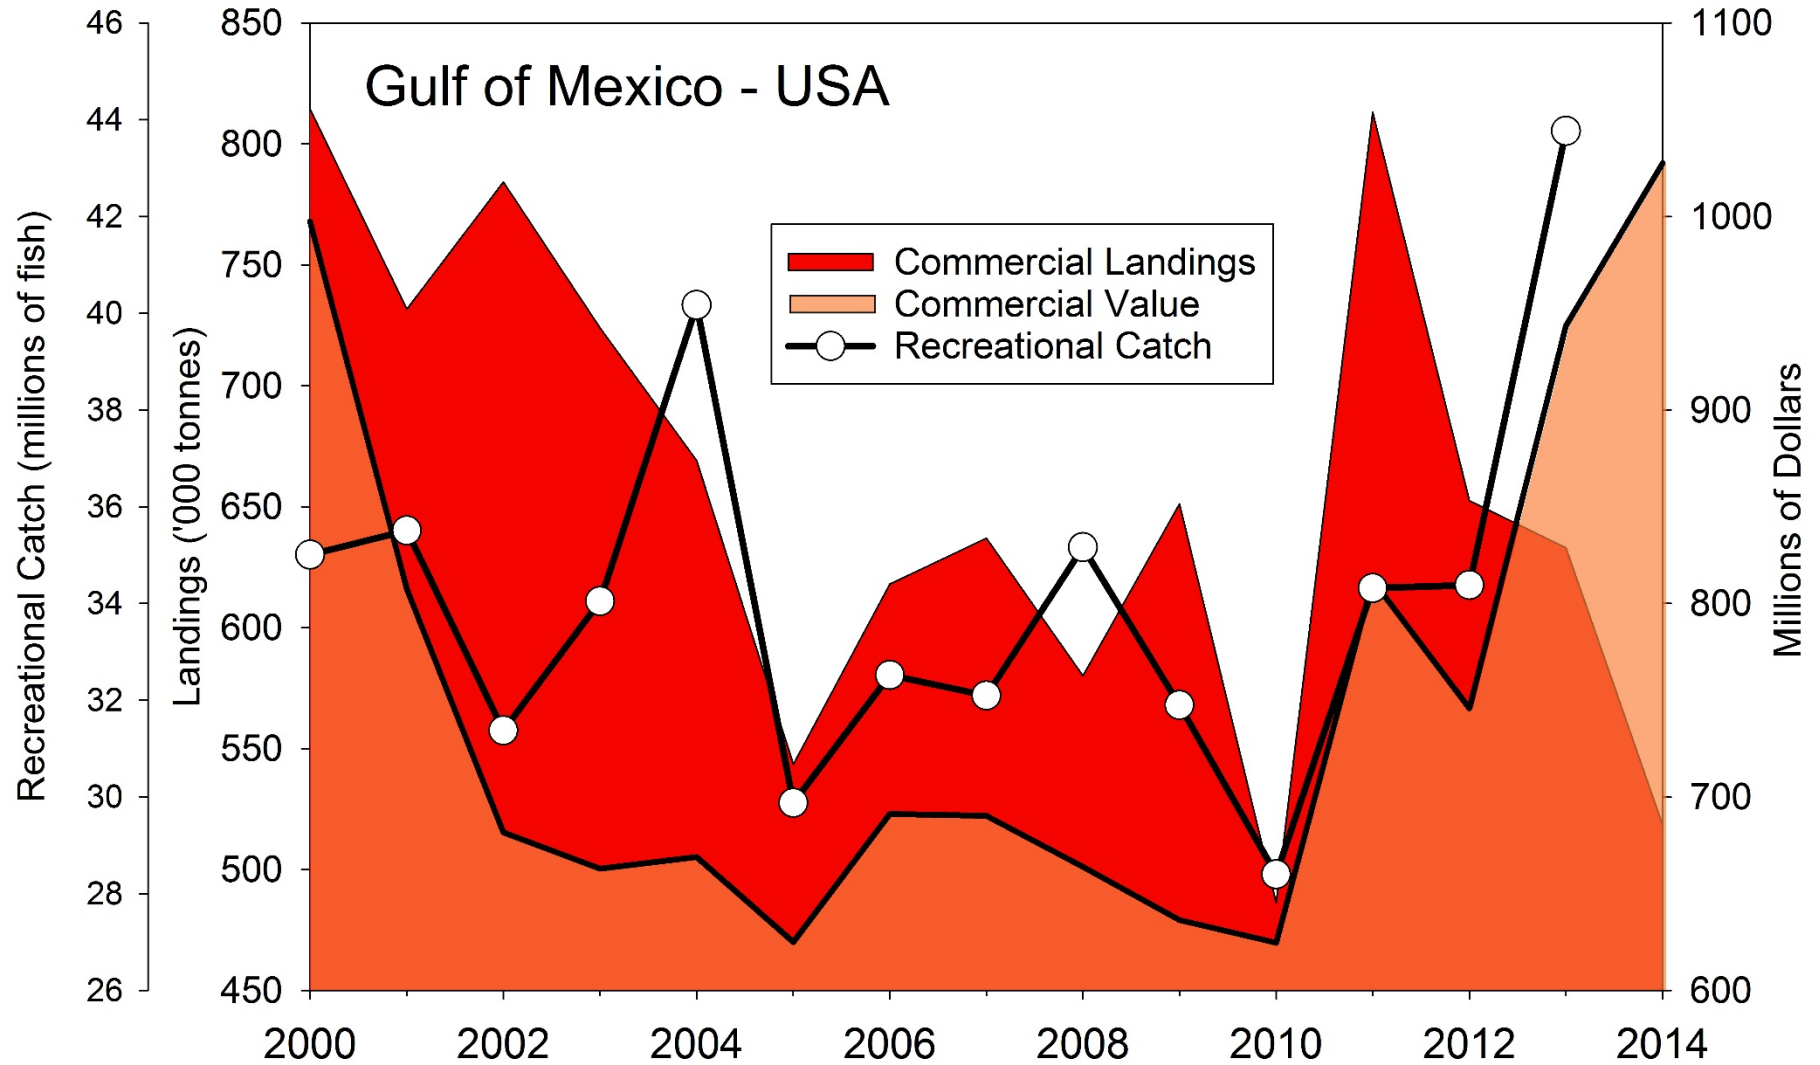

# Possible Sub-Surface Transport of Dissolved Hydrocarbons to WFS Accounts for PAHs on the West Florida Shelf?

# What About Gulf of Mexico Fisheries?

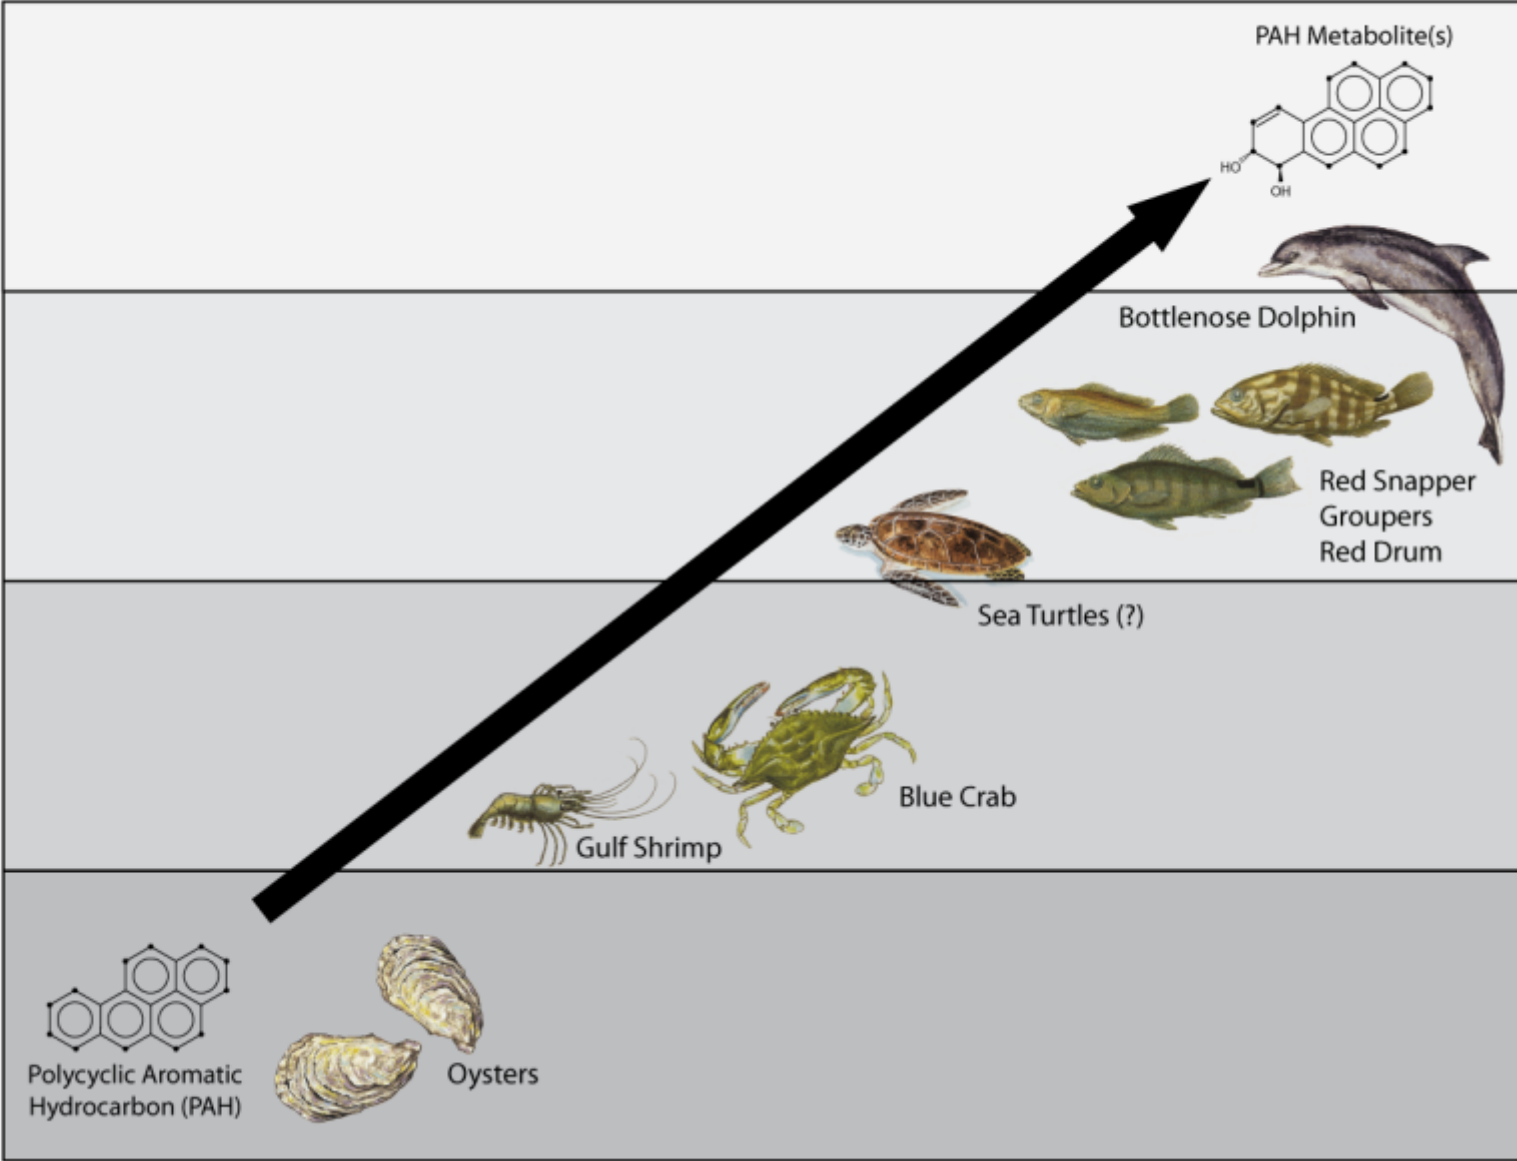

# Extent of Metabolism of PAHs

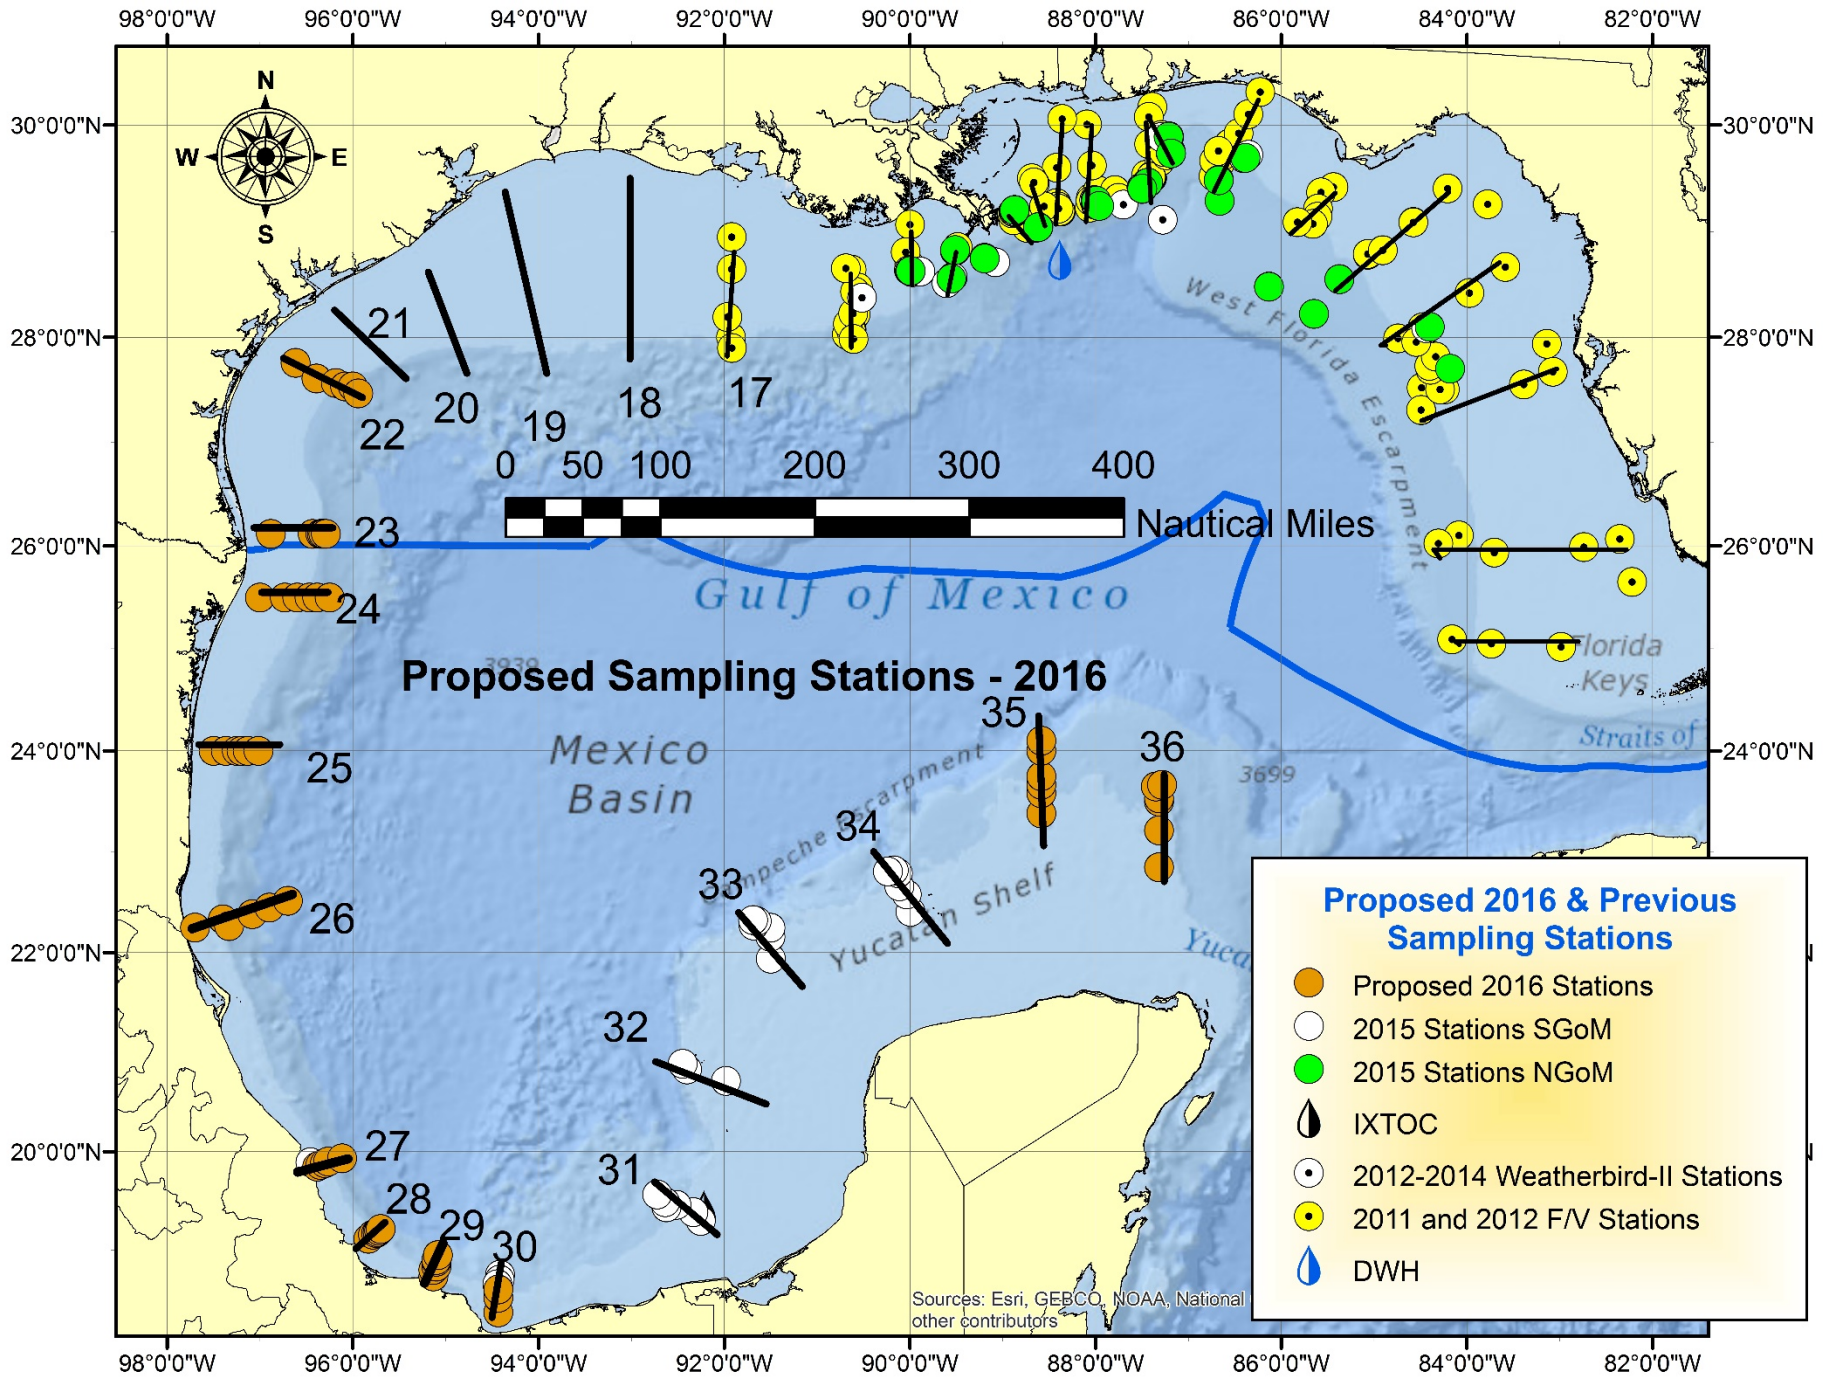

EXCRETION

RETENTION

Depiction by Su Kim based on "Metabolism of PAHs in the Aquatic Environment, ISBN# 0-8493-6844-8 Editor U.Varanasi

Skin Ulcers on Red Snapper

Southern hake

tilefish

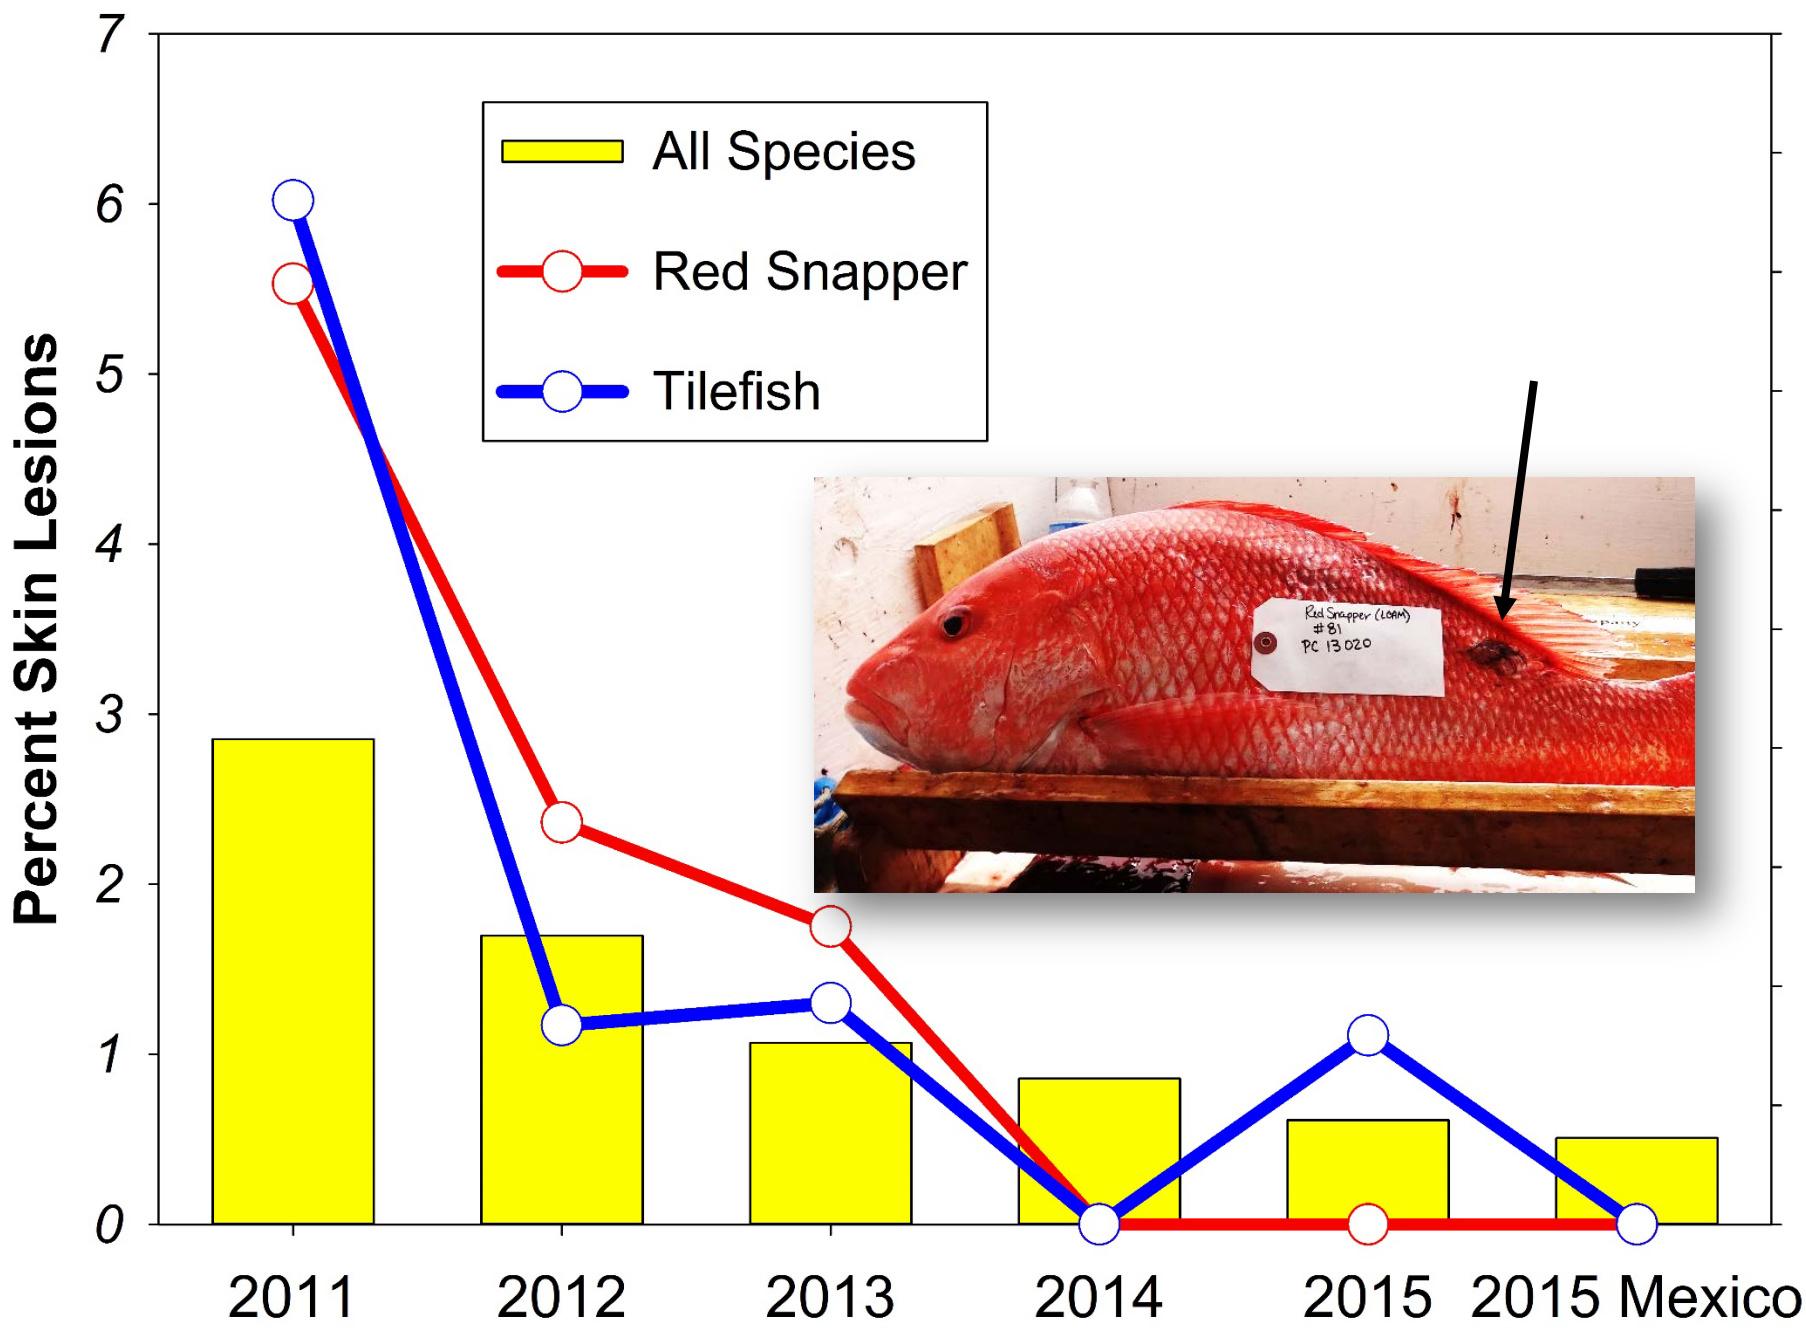

Conger eel

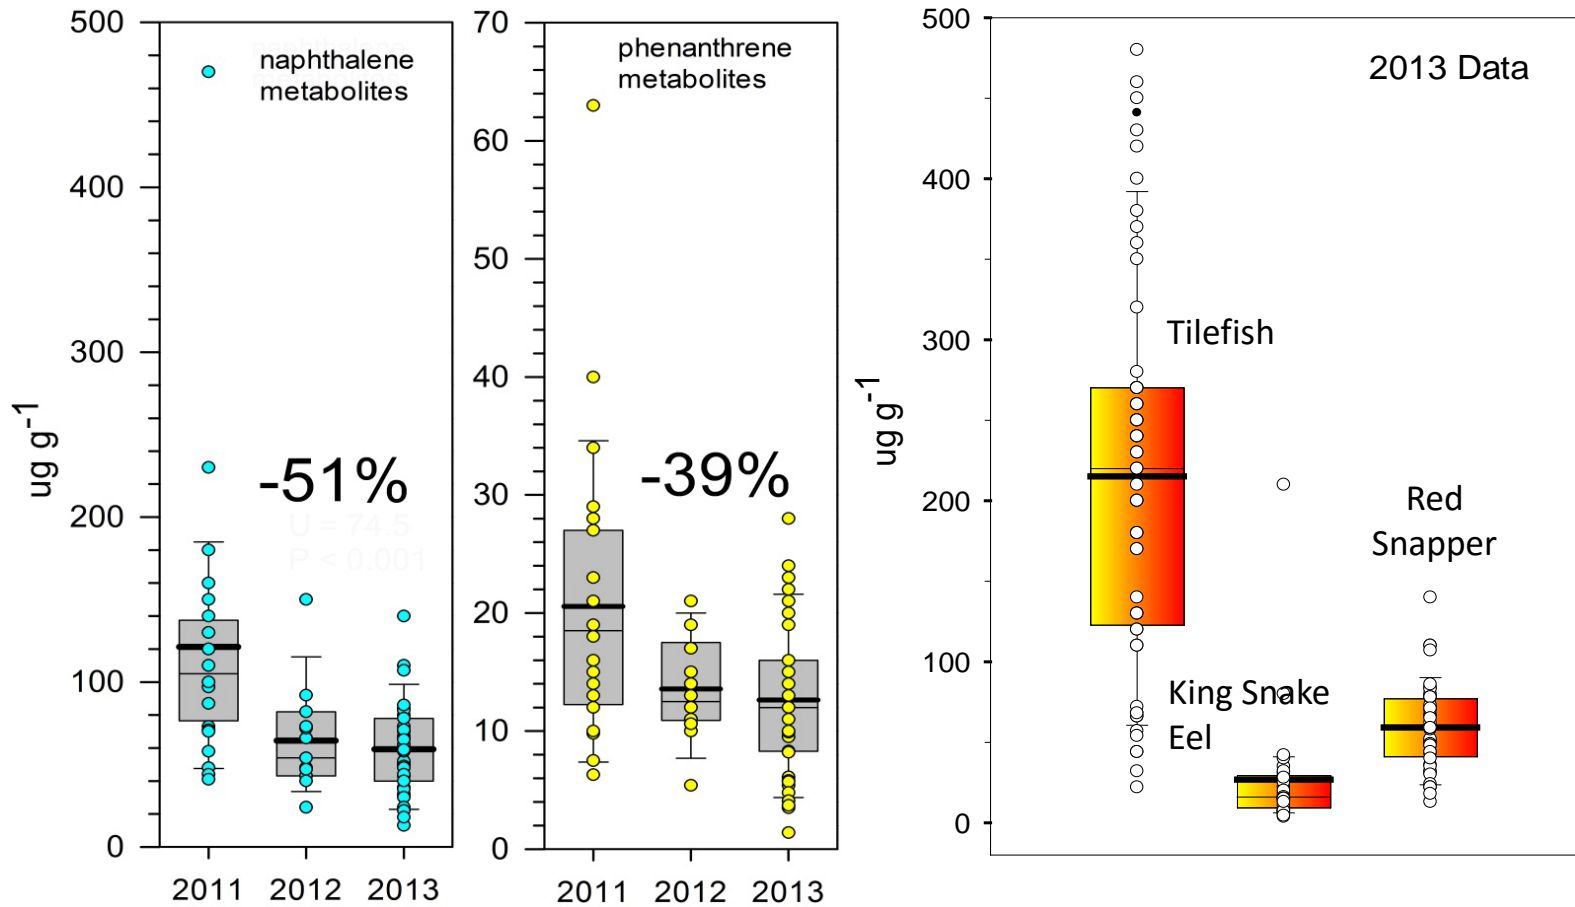

SO ALL OF A SUDDEN  
A NUMBER OF GULF  
FISH ARE TURNING UP  
WITH LESIONS, FIN ROT AND  
STRANGE BLACK MARKS...  
WHAT MAKES YOU THINK  
IT HAS ANYTHING TO DO  
WITH OUR DEEPWATER  
HORIZON SPILL?

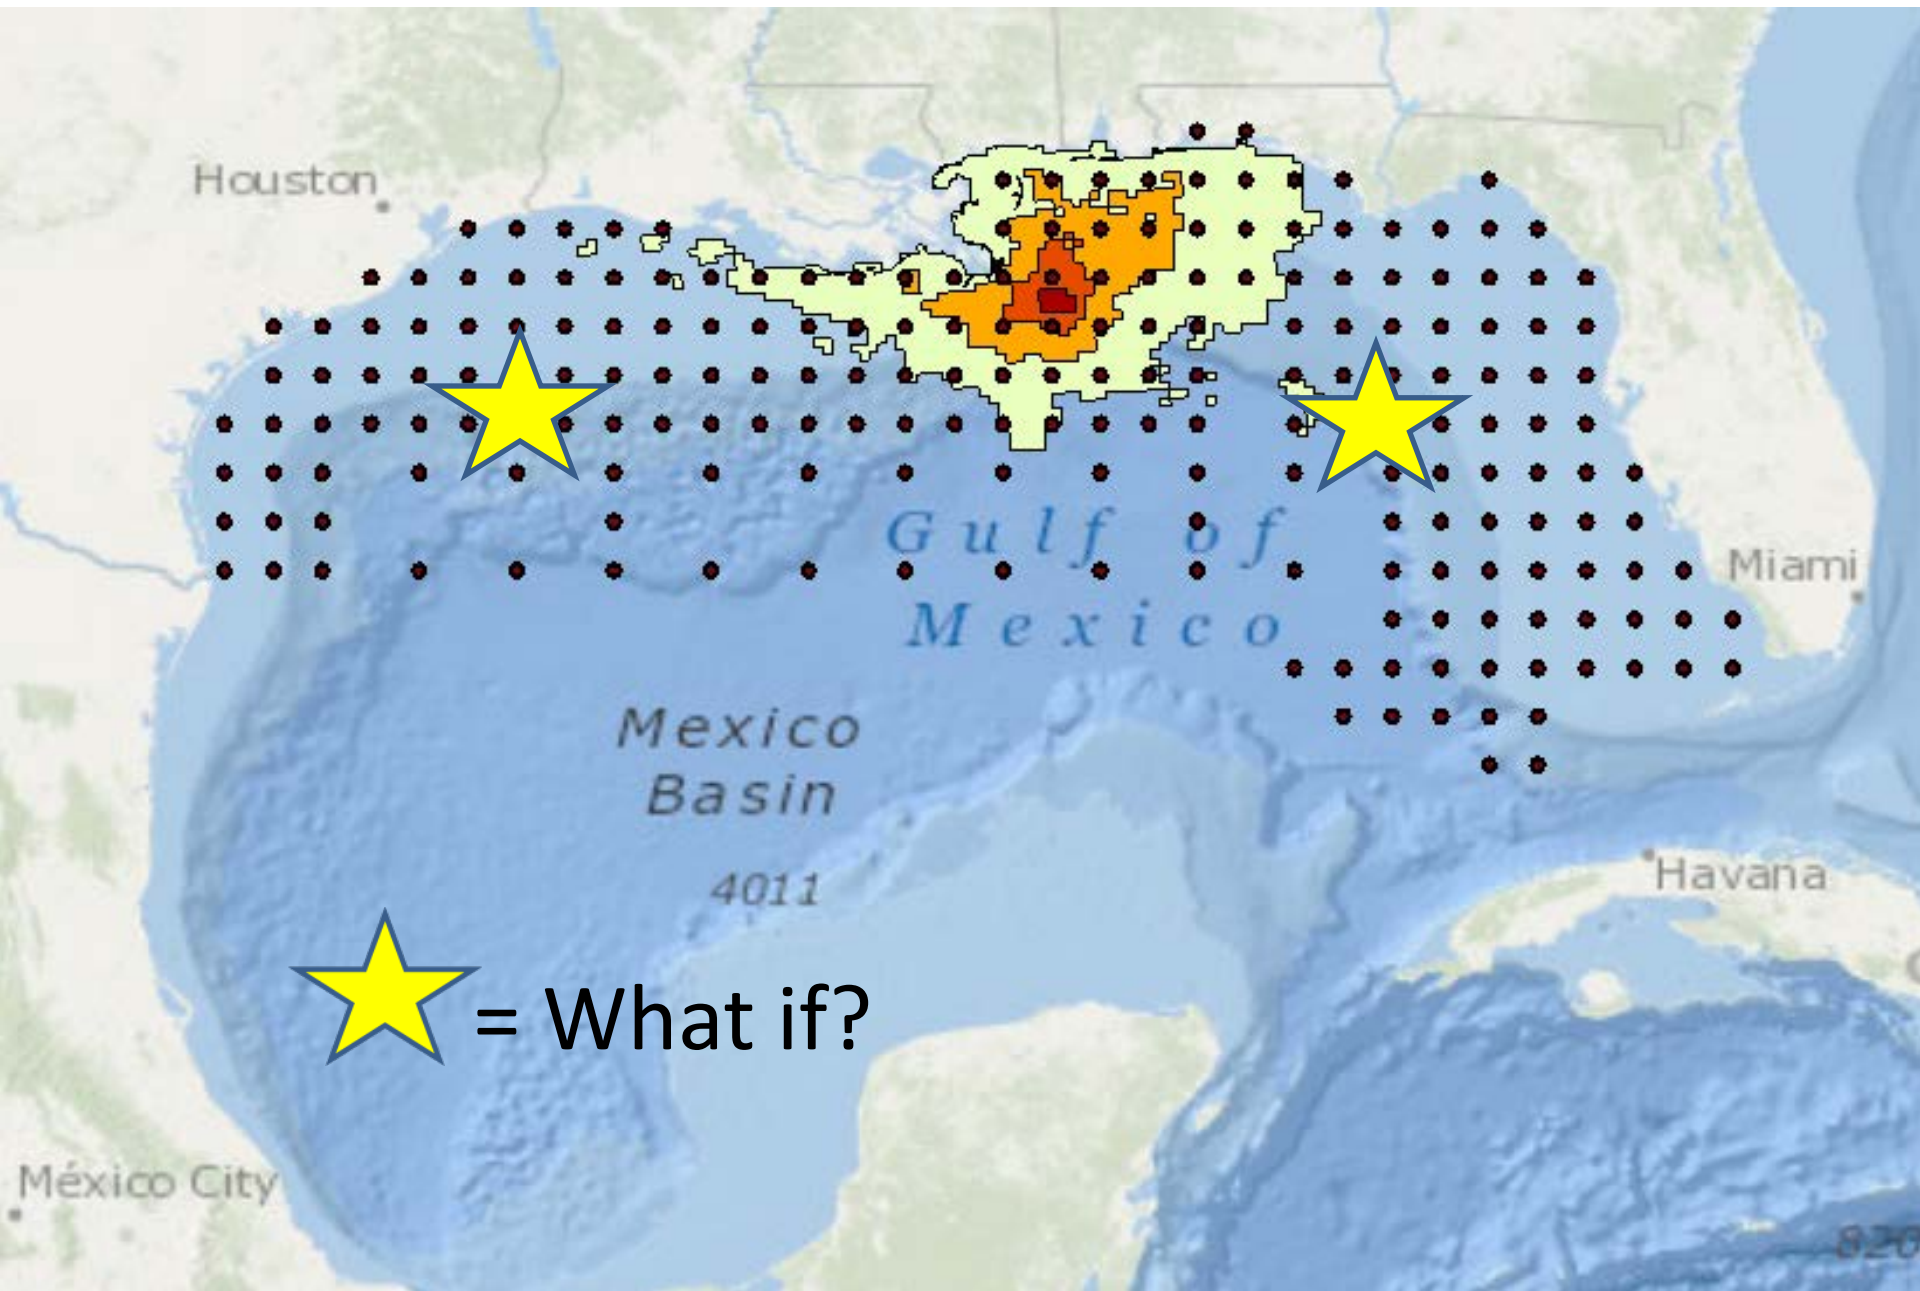

Changes in bile contamination of naphthalene and phenanthrene metabolites in red snapper (left) sampled in the Northern Gulf of Mexico, 2011-2013

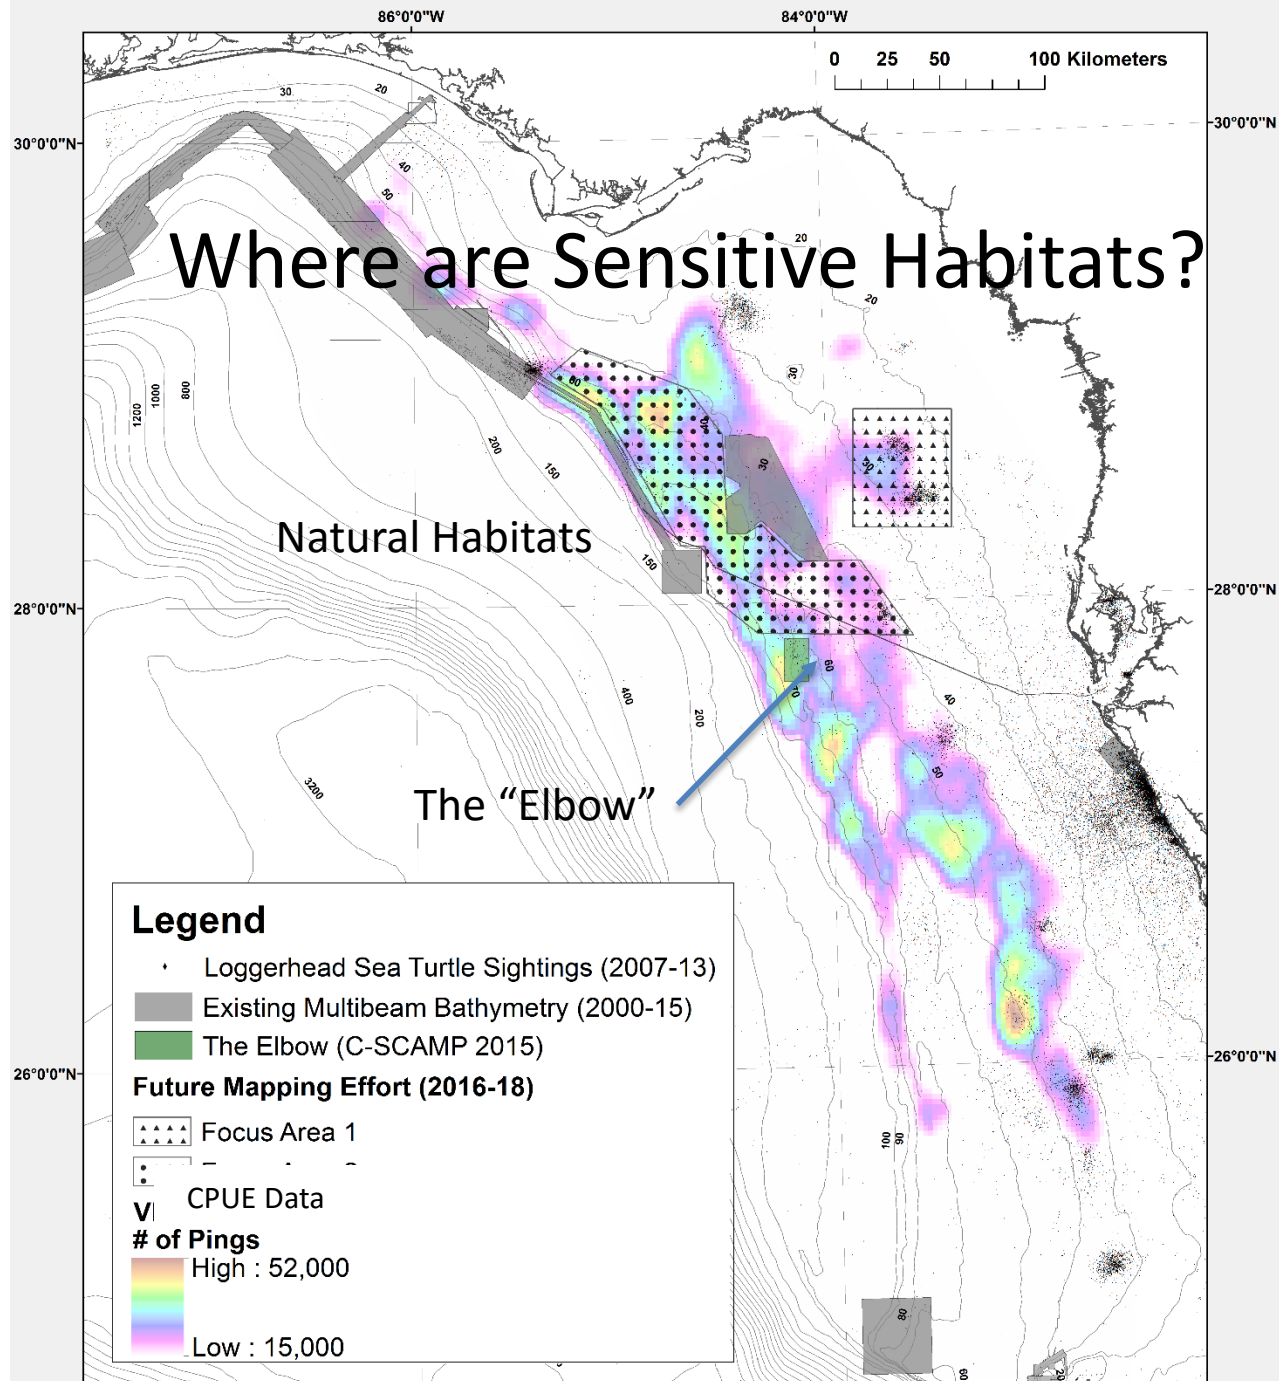

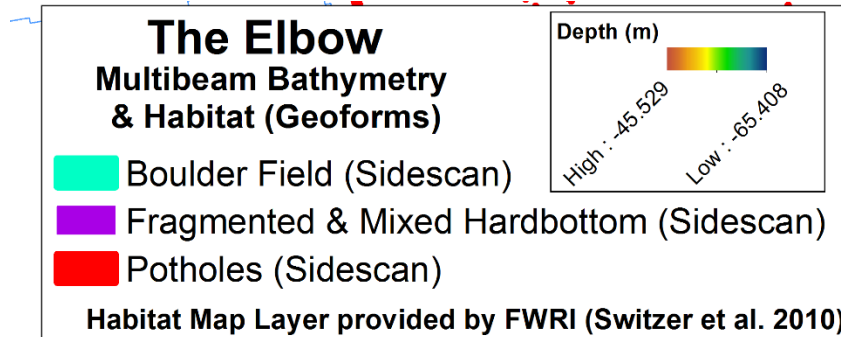

# Fish Larvae Data, 1982-Present vs. Oil Spill Distribution

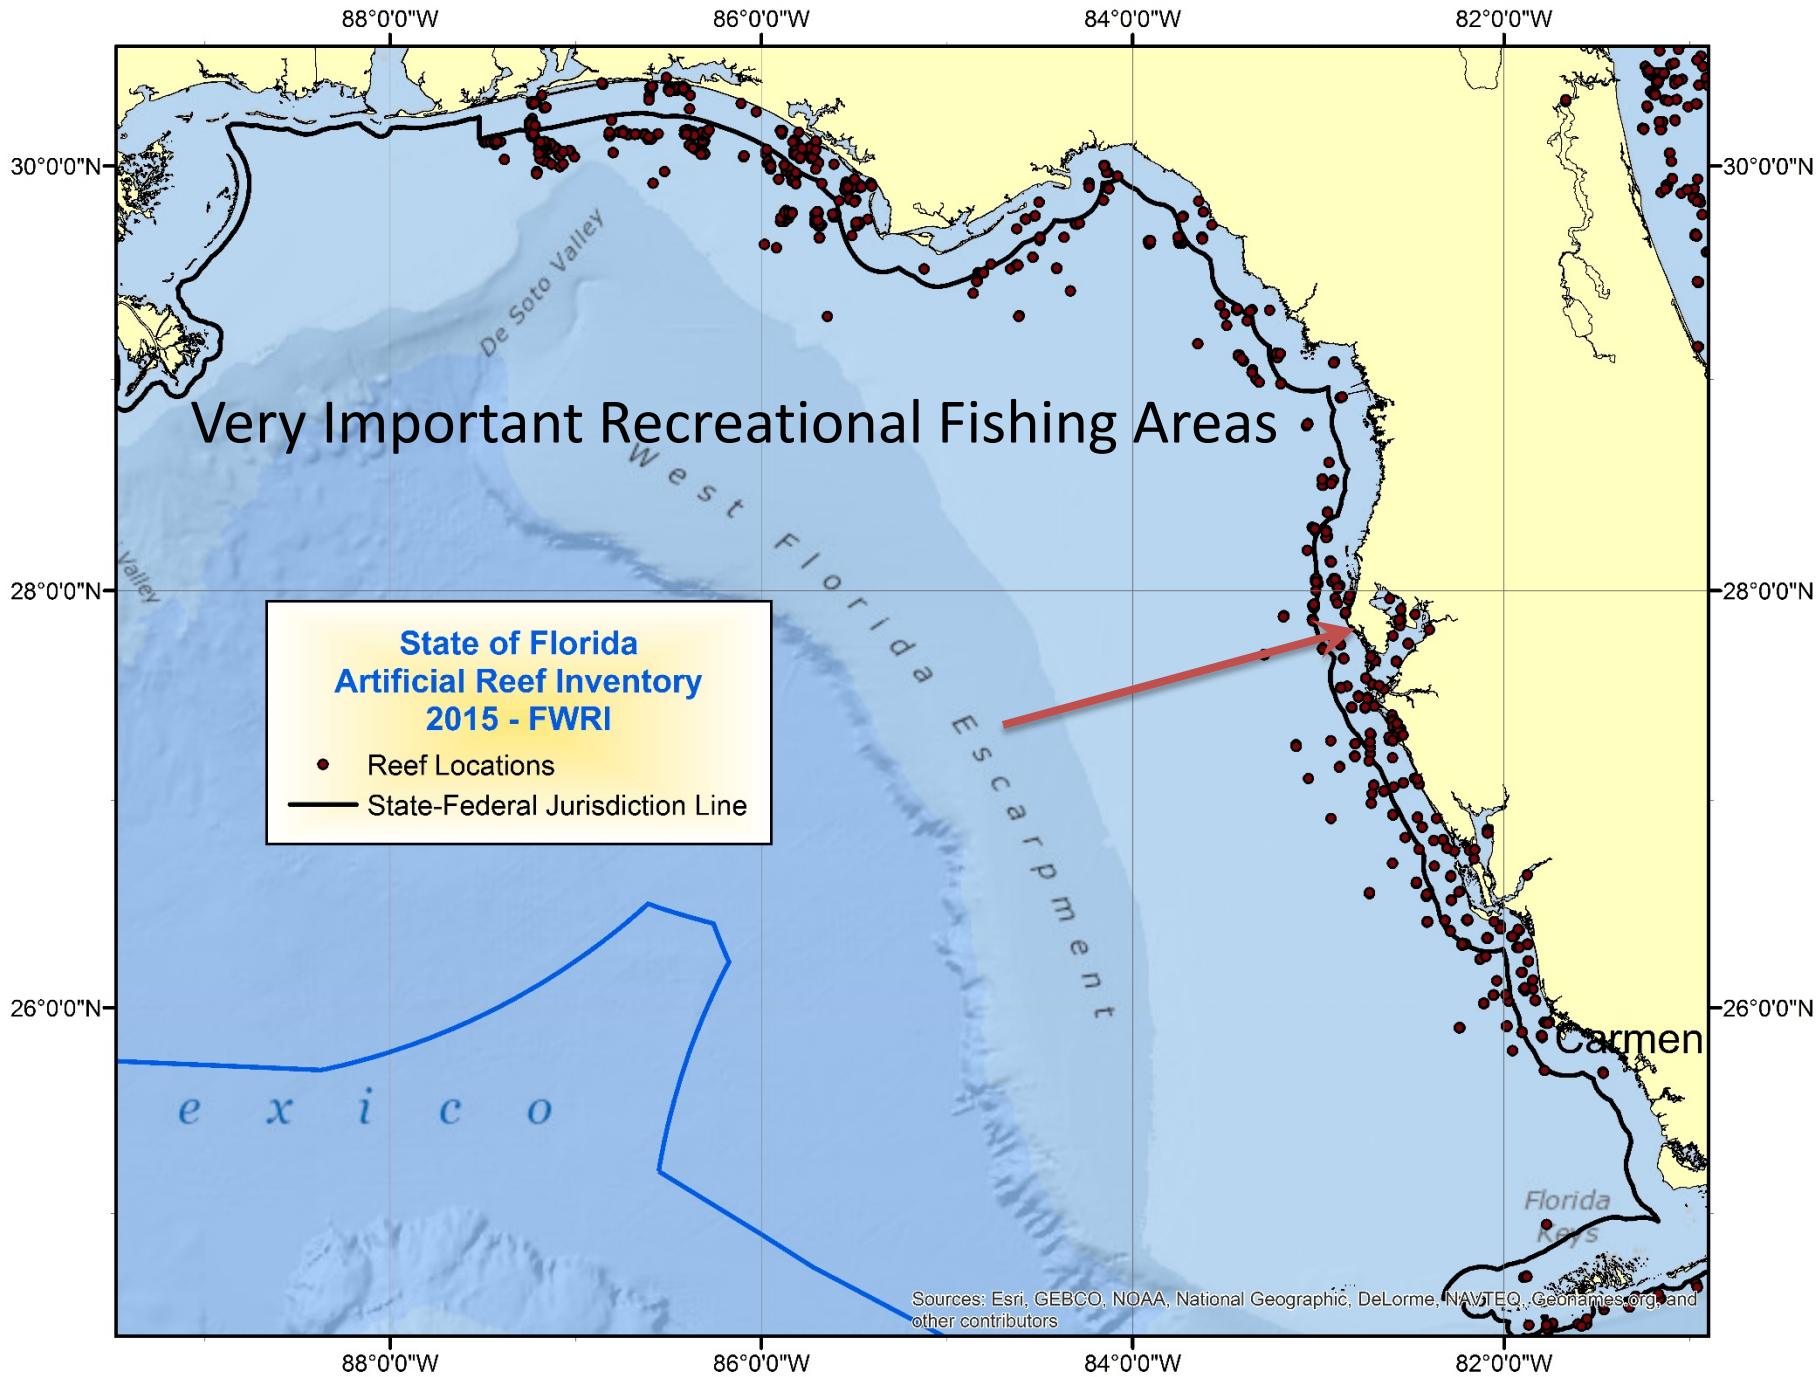

# High-Resolution Habitat Mapping

# Elbow, Hard Bottom Ridge

**What Else do we Need to Know?**

- What are the Baselines of contamination in sediments, water and biota associated with the ~4,000 oil and gas facilities in the Gulf (and pipeline fields as well)
- How do the depth of the water and specific oil composition affect the efficacy of response measures?
- What resources are at risk from a potential oil spill at any location in the Gulf?
- How would surface and sub-surface oil spills move, at what rates, and in response to what factors?
- What are the environmental consequences of oil spill response measures (burning, dispersants, sand berms, water releases)?
- Can ultra-deep drilling and production be accomplished with greatly reduced risks of environmental damage?

# Summary

- Considerable progress in understanding the impacts of DWH, some of which will be with us for decades
- Science investments by various sources are helping to understand what the best response strategies are
- The next spill will not be like DWH – probably deeper and in a different location
- We are better prepared but are we adequately prepared?

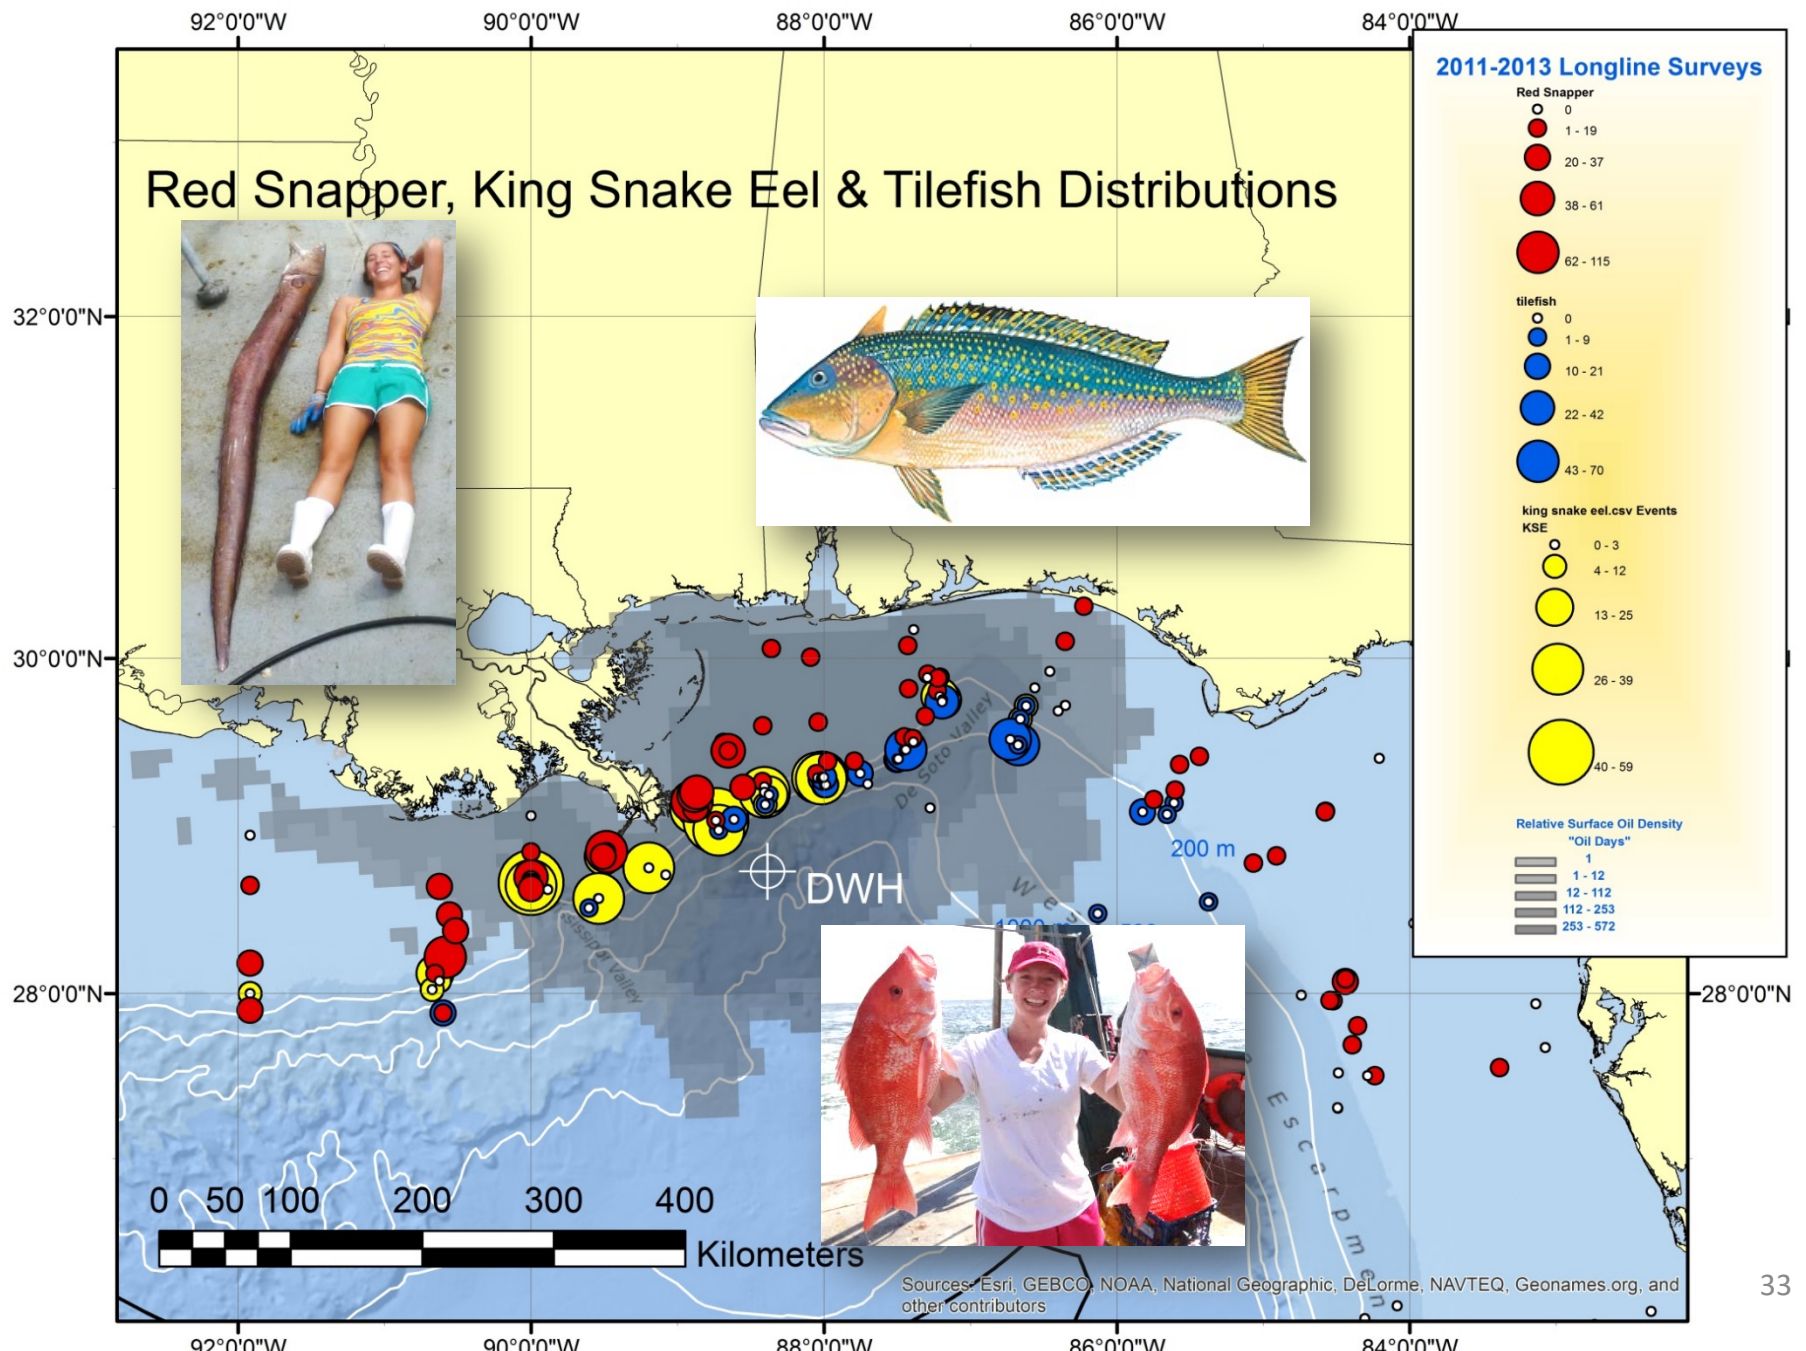

**Questions?**

# Backup Slides

Different species can exhibit different contamination levels, even if taken from the same place

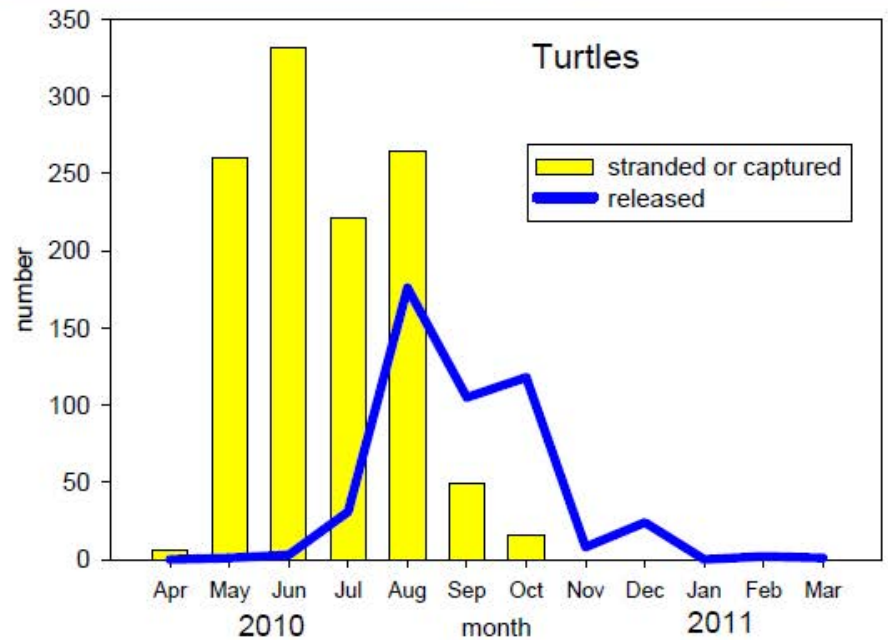

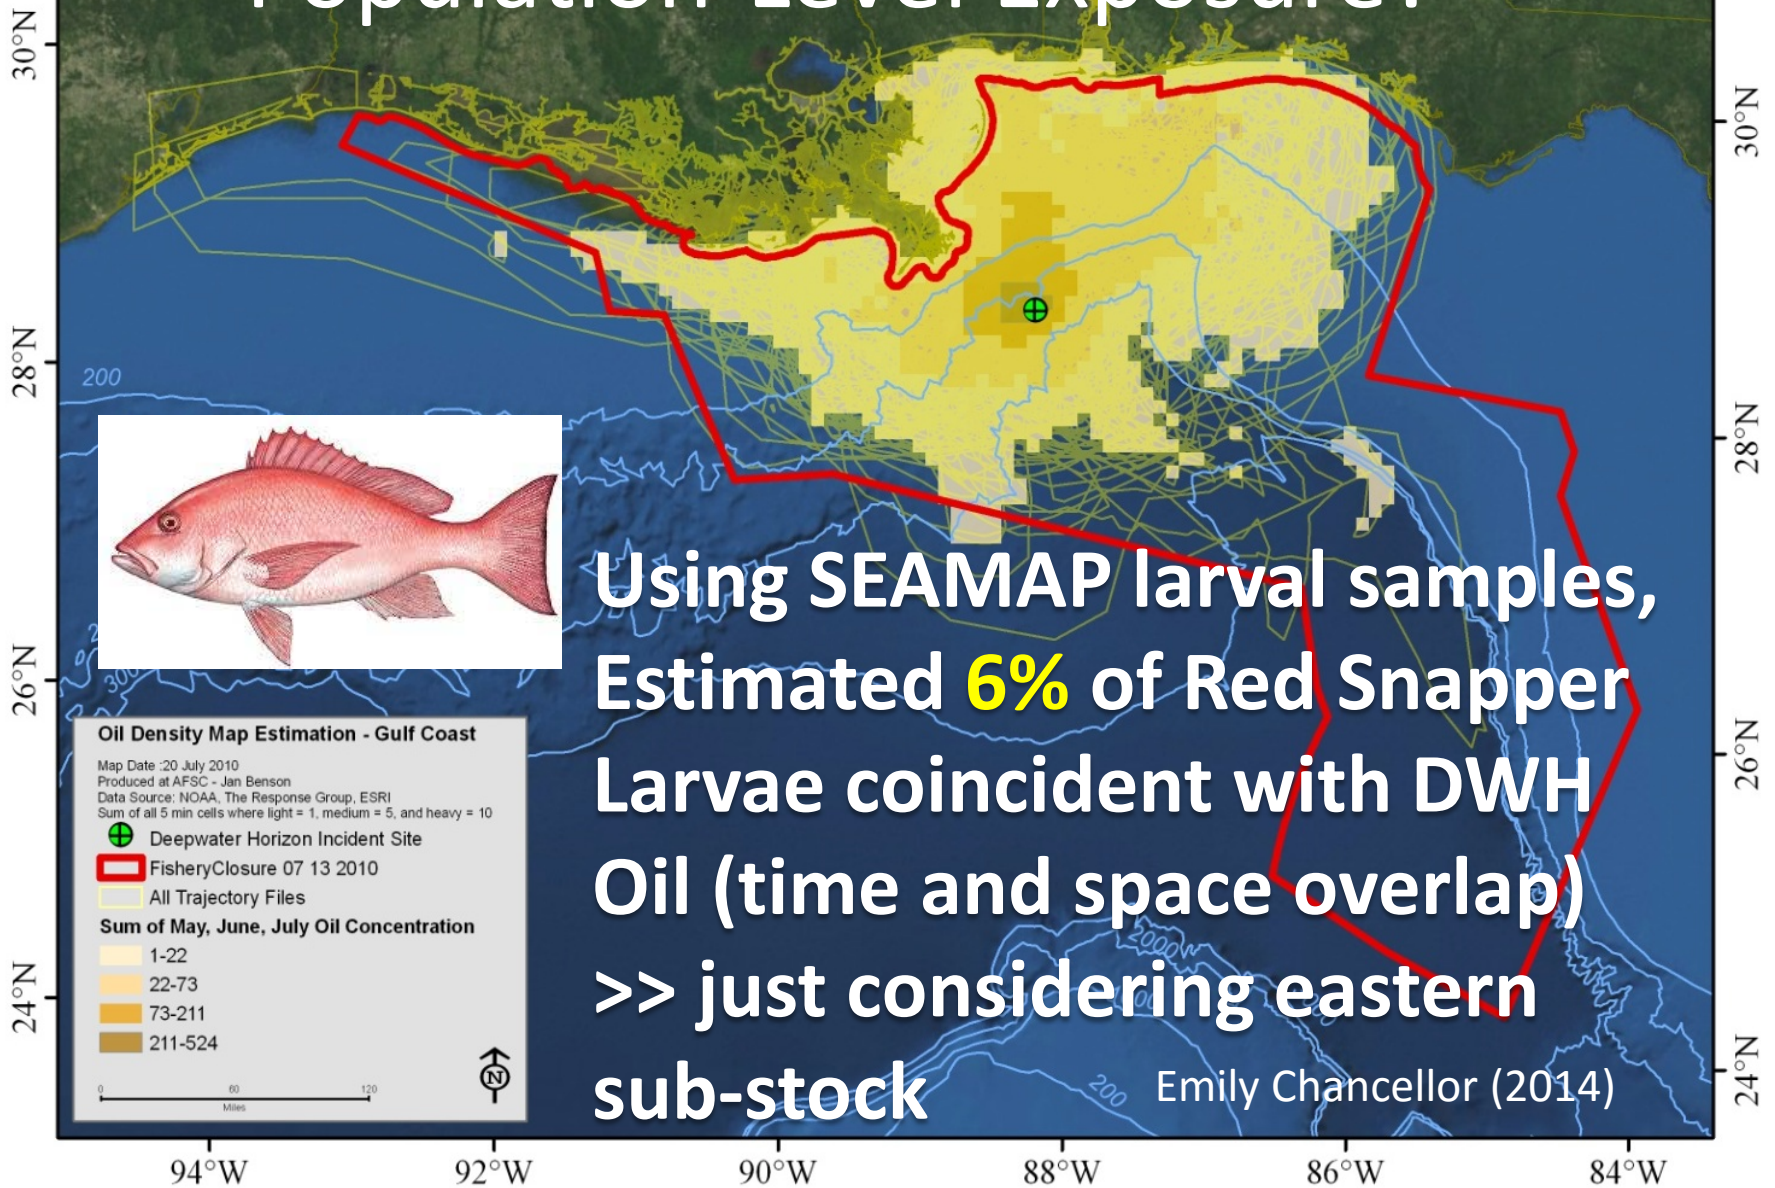

1,149 total turtles  
469 released alive after  
rehabilitation

Most juvenile  
Kemps Ridley

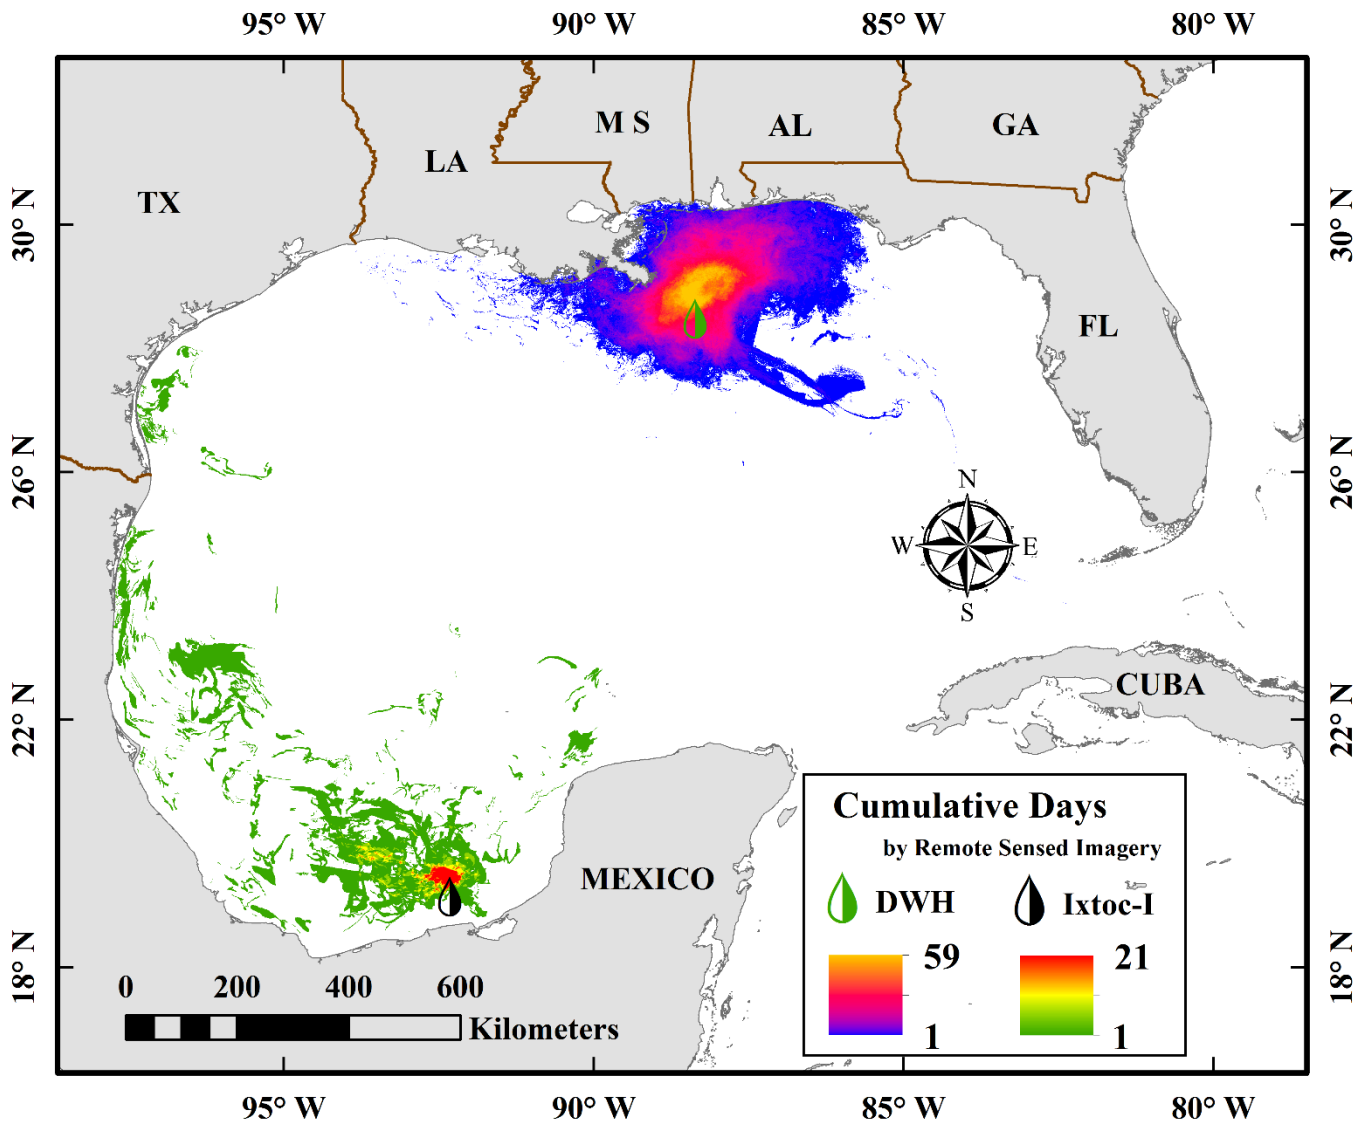

# Population-Level Exposure?

Using SEAMAP larval samples,  
Estimated **6%** of Red Snapper  
Larvae coincident with DWH  
Oil (time and space overlap)  
>> just considering eastern  
sub-stock

# Dolphin Strandings

## Health Study in Barataria Bay

167 dolphins  
5 released

# Proportion

0 20 40 60 80 100

- Atlantic sharpnose shark*
- red snapper*
- king snake eel*
- gulf smoothhound*
- golden tilefish*
- red grouper*
- little gulper*
- shortspine dogfish*
- yellowedge grouper*
- gulf hake*
- southern hake*
- gafftopsail catfish*
- palespotted eel*
- red porgy*
- blacknose shark*
- wenchman*
- scamp*
- hardhead catfish*
- spinycheek scorpionfish*
- Cuban dogfish*
- blacktip shark*
- dusky shark*
- spiny dogfish*
- rock sea bass*
- bignose shark*
- smooth dogfish*
- snowy grouper*
